1 About this manual

This manual is intended for Kvaser USBcan Light users. This document contains a description of the hardware's properties and general instructions for connecting the device to a computer.

2 Introduction

This section will describe the functions and features of the Kvaser USBcan Light.

2.1 Welcome to Kvaser USBcan Light

Figure 1: Kvaser USBcan Light

Kvaser USBcan Light is a reliable low cost product. With a time stamp precision of 100 microseconds it handles transmission and reception of standard and extended CAN messages on the bus. It is compatible with applications that use Kvaser's CANlib.

This guide applies to Kvaser USBcan Light devices listed in Table 1 on Page 6.

Device	Product Number
Kvaser USBcan Light 2xHS	73-30130-00714-7

Table 1: Kvaser USBcan Light devices and their EAN numbers.

2.2 Major features

- USB CAN interface.
- Quick and easy plug-and-play installation.
- Supports both 11-bit (CAN 2.0A) and 29-bit (CAN 2.0B active) identifiers.
- 100% compatible with applications written for other Kvaser CAN hardware with Kvaser CANlib.
- High-speed CAN connection (compliant with ISO 11898-2), up to 1 Mbit/s.
- Fully compatible with J1939, CANopen, NMEA 2000[®] and DeviceNet.
- Simultaneous operation of multiple devices.

2.3 Additional software and documentation

The Kvaser CANlib SDK includes everything you need in order to develop software for the Kvaser CAN hardware. The SDK contains full documentation and many sample programs, written in C, C++, C#, Delphi, Python and Visual Basic. All Kvaser CAN interface hardware share a common software API. Programs written for one device type will run without modification on other device types.

The latest versions of documentation, software and drivers can be downloaded for free at <http://www.kvaser.com/download/>.

3 Kvaser USBcan Light hardware

In this section you can read more about the CAN channels, power supply and LED indicators.

3.1 Hardware installation

The Kvaser USBcan Light may be inserted in any free USB socket on the host computer. You do not need to switch the power off before inserting or removing the device.

For the Kvaser USBcan Light to communicate with the host computer, the correct version of the Kvaser driver and firmware must be installed. The firmware is downloaded and installed directly on the Kvaser USBcan Light and the driver is installed on the host computer. The latest version of the driver and firmware can be downloaded from <http://www.kvaser.com/download/>.

The driver is installed by running the file `kvaser_drivers_setup.exe`.

For information on how to upgrade the firmware, see Section 4.4, Updating the firmware, on Page 12.

3.2 USB connector

The Kvaser USBcan Light has a standard USB type "A" connector.

3.3 CAN channels

The Kvaser USBcan Light has two CAN Hi-Speed channels with 9-pin DSUB CAN connectors (see Figure 2 on Page 9). See Section 4.2, CAN connectors, on Page 11 for pinout information.

3.4 Power supply

The Kvaser USBcan Light is powered from the USB port.

3.5 LED Indicators

The Kvaser USBcan Light has three LEDs as shown in Figure 3. Their functions are shown in Table 2 on Page 10.

Figure 3: LEDs on the Kvaser USBcan Light.

LED	Function	Description
PWR (Green)	Power	Steady light when unit is powered and working.
	USB configuration	Blinking once every three seconds when something is wrong with the USB connection.
	Firmware	2 Hz flash if something is wrong with the firmware or configuration.
CAN 1 (Yellow)	CAN RxTx	Status for CAN channel 1.
CAN 2 (Yellow)	CAN RxTx	Status for CAN channel 2.

Table 2: LEDs on the Kvaser USBcan Light.

3.6 Troubleshooting

Use “Kvaser Hardware” in the Control Panel to verify that the computer can communicate with the Kvaser USBcan Light, if the firmware version shown is all zeroes, there are communication problems.

If the LEDs are not flashing or illuminated at all, check the power supply.

4.3 CAN bus termination

Every CAN bus must be terminated with a 120 Ohm resistor at each end of the bus. The Kvaser USBcan Light does not contain any CAN bus termination, because their inclusion could cause severe disturbance in a system which is already correctly terminated.

For laboratory or testing use, the exact value of the termination resistors is not always critical. Sometimes a single terminator is sufficient. For production, proper termination is essential. If you see error frames on the bus, you should check the termination.

To save yourself a lot of trouble, always terminate the CAN bus properly.

4.4 Updating the firmware

For the Kvaser USBcan Light to communicate with the host computer, compatible versions of the Kvaser CANlib (including driver) and firmware must be installed.

The latest versions of firmware and drivers can be downloaded for free at <http://www.kvaser.com/download/>.

Connect the Kvaser USBcan Light to your PC with the USB cable. Start the update.exe application. A window opens where you should see the device listed if correctly connected to your PC. Select the device to update and click the Next button. Read the Release Notes carefully.

Click on the Start Upgrade button to start programming. Programming takes approximately 30 s. The progress is displayed on the screen.

If you see any error messages, try to disconnect and reconnect the device, and then perform the operation again.

To verify that the firmware has been updated, open "Kvaser Hardware" in Control Panel. Select "Kvaser USBcan Light" in the tree view to the left, and click on the channel. The firmware revision information appears in the right half of the window.
